

REGENACR[®]

AUTOLOGOUS CELLULAR REJUVENATION

REGEN PRP PIONEERING A-PRP SINCE 2003

Regen Lab has been pioneering the use of autologous platelet rich plasma to regenerate ageing skin.

The proven Regen ACR PRP system concentrates powerful growth factors contained in our blood, before reinjecting them back into the skin.

By harnessing the growth factors contained in our blood, it's possible to accelerate and increase tissue regeneration by stimulating collagen production, stem cell migration, differentiation, and proliferation, and stimulation of new blood vessels, nutrients, antioxidants and the other components of the extracellular matrix.

- Full face rejuvenation
- Neck, décolletage, eyes
- Fine lines
- Textural improvement
- Body areas
- Scarring
- Hair loss

- In combination with laser
- In surgical procedures
